Steps

1. Install JRE(JAVA RUNTIME ENVIRONMENT):

<https://www.java.com/en/download/>

2. Install JDK(JAVA SDK):

<https://www.oracle.com/java/technologies/javase/javase-jdk8-downloads.html>

3. Set Environment Variables:

JAVA_HOME: jdk root

CLASSPATH: jdk root/lib

Path: jdk root/bin

4. Install Eclipse IDE:

<http://www.eclipse.org/downloads/>

5. Install Git

<https://git-scm.com/>

Install JRE (JAVA RUNTIME ENVIRONMENT)

- <https://www.java.com/en/download/>
- After download, keep clicking "Next" to install.

Set Environment Variables

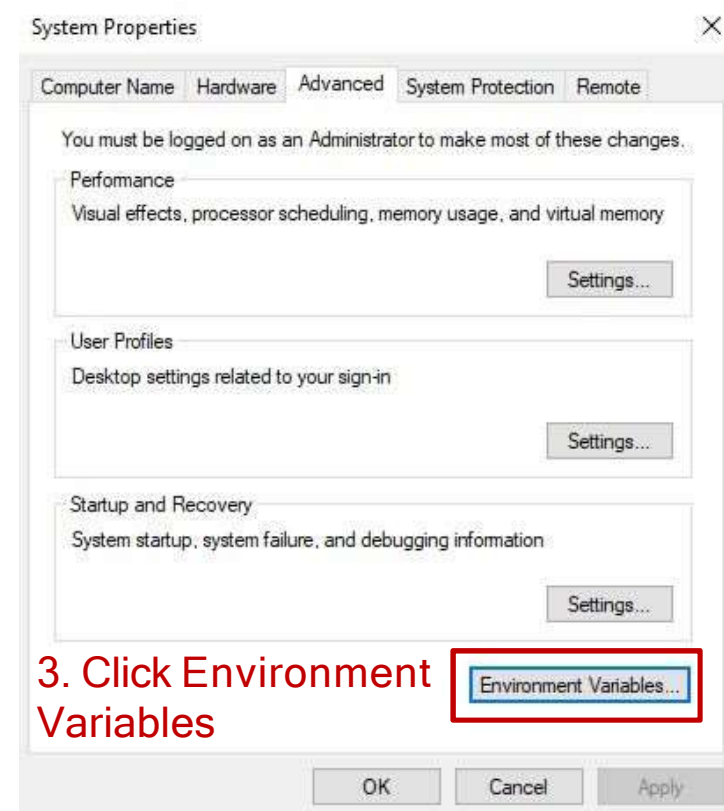

- Notice: You don't need to set environment variables on MAC OS.
- Environment Variables are the common variables in OS. Therefore, to let the OS know where we install JDK and JRE, we will set the following three environment variables:
 1. JAVA_HOME:
Location of the installation directory of JAVA
 2. CLASSPATH:
Location of the library of JAVA developer tool
 3. PATH:
Add JAVA-related commands to the system default search location

Set Environment Variables

1. Settings -> System -> About

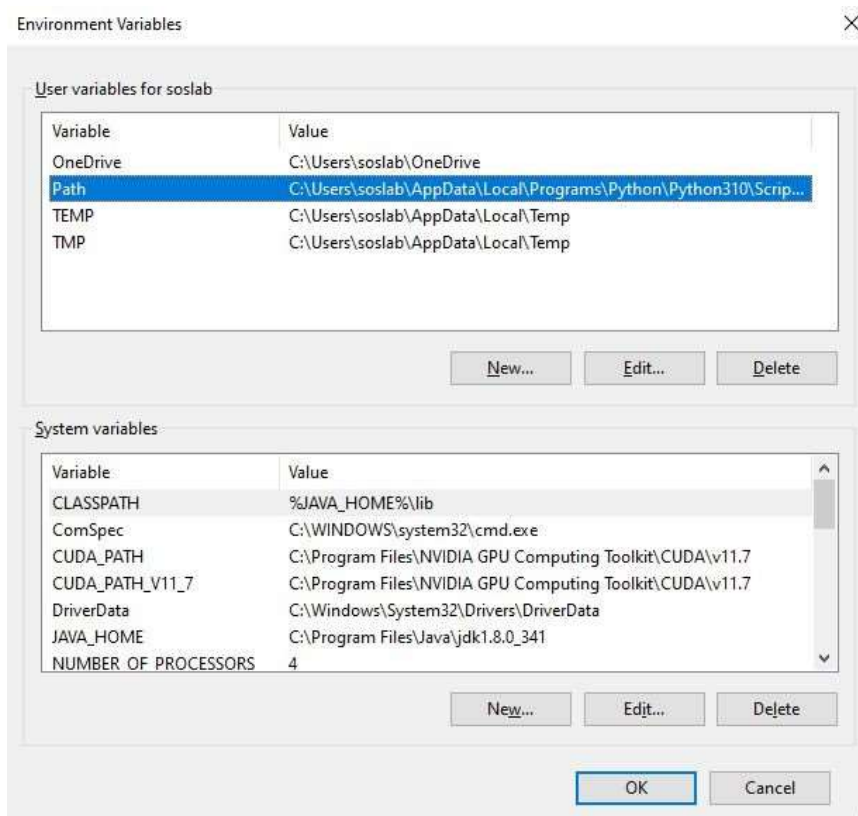

2. Click Advanced system settings

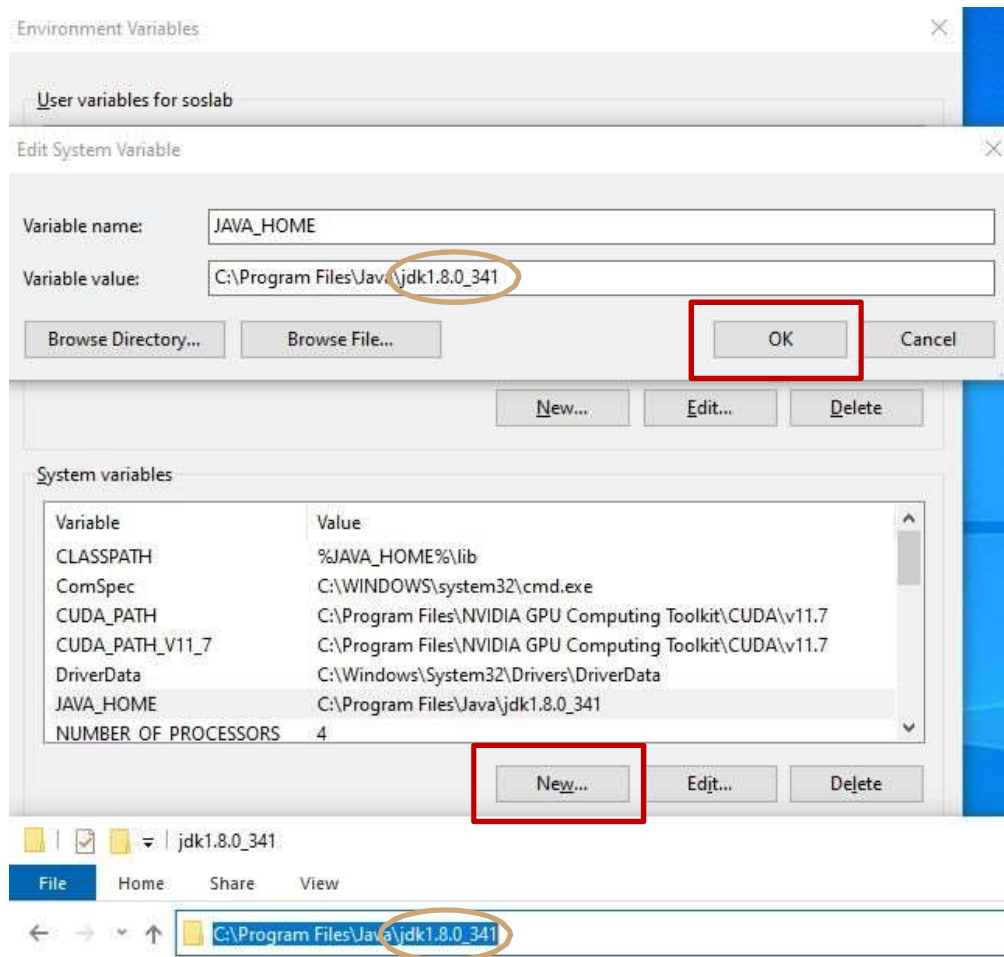

3. Click Environment Variables

Set Environment Variables

- If we set environment variables in the upper section (User variables for XXX), it means our setting only works when XXX login Windows.
- If we set environment variables on bottom section (System variables), it works when any user login.
- Recommend that you use the bottom (System variables) to set environment variables.

Set Environment Variables JAVA_HOME

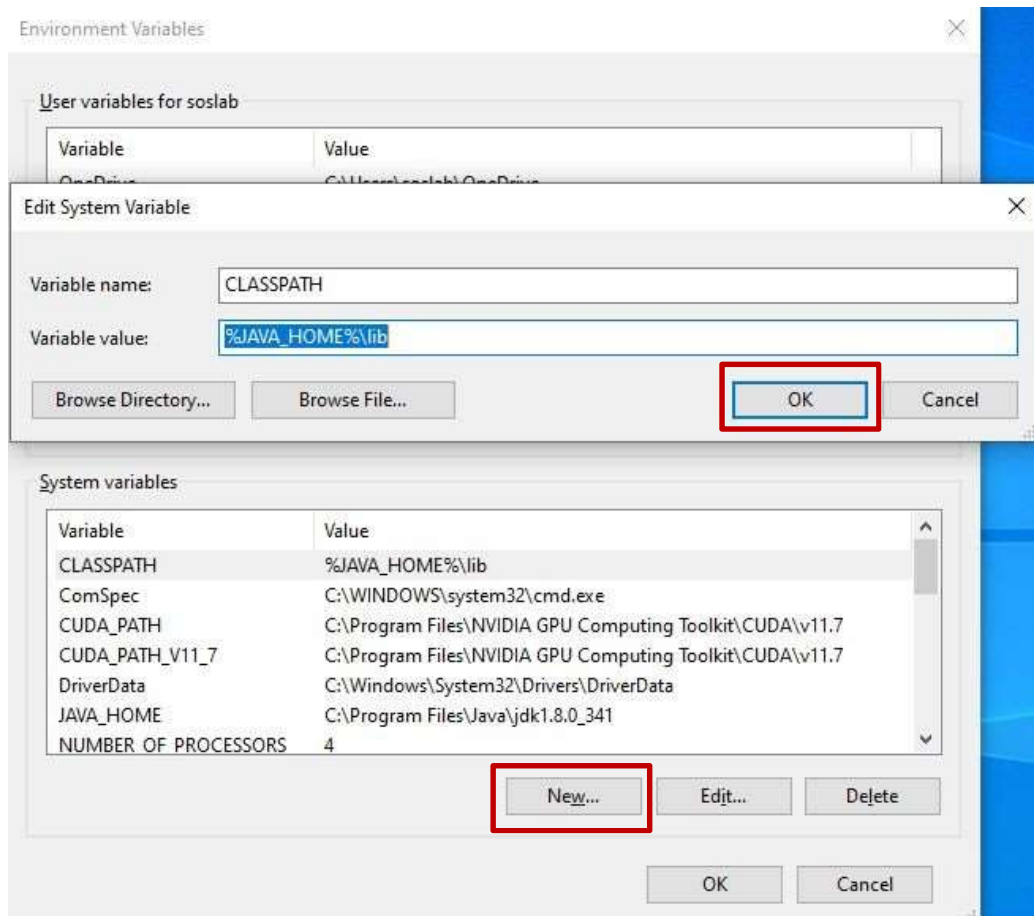

1. Click "New"
 - Variable name: JAVA_HOME
 - Variable value: installation directory of JDK

X64 windows usually is:
C:\ProgramFiles\Java\jdkXXXXXXXX

X86 windows usually is:
C:\Program Files(x86)\Java\jdkXXXXXXXX

 - The red part depends on the version; please check whether the directory exists and set the environment variables.
1. Click "OK" to save.

Set Environment Variables CLASSPATH

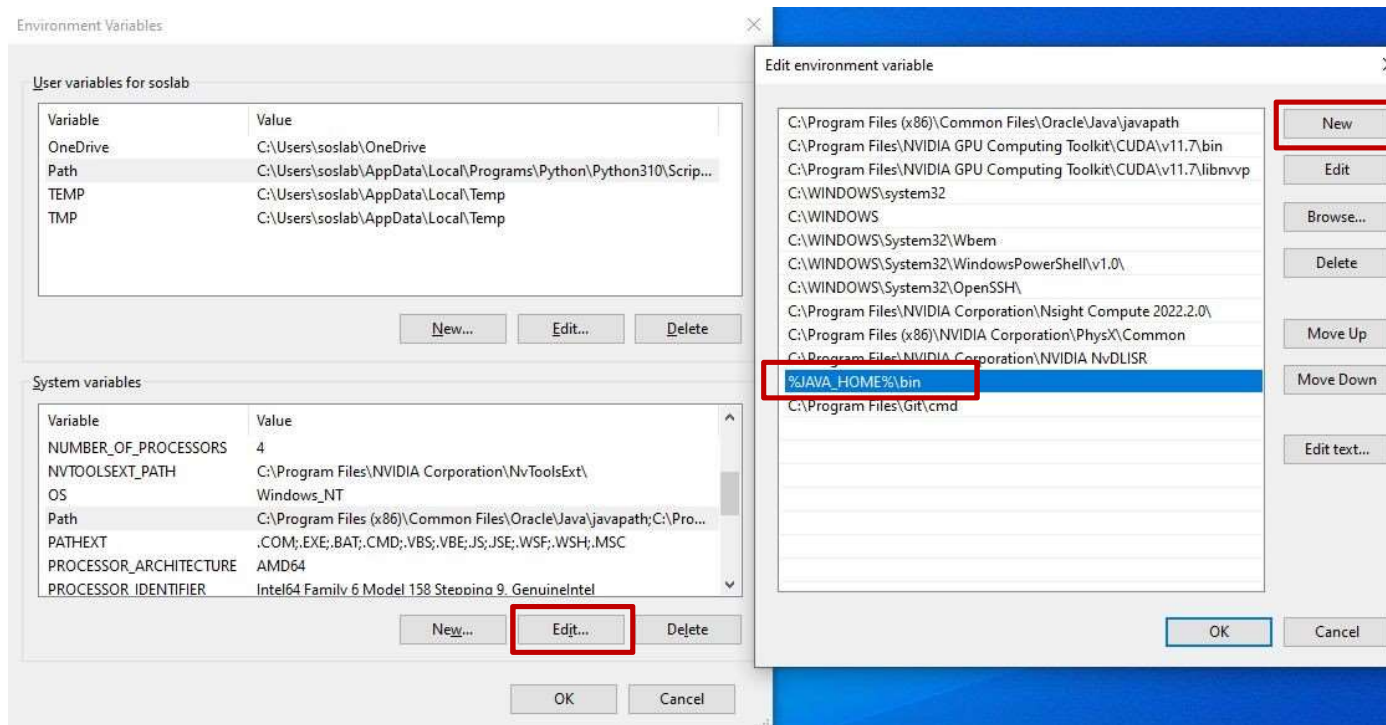

1. Click "New"
 - Variable name: CLASSPATH
 - Variable value: **%JAVA_HOME%\lib**
installation directory of JDK
 - **%JAVA_HOME%** is the path of JAVA_HOME
 - If you alter the Java JDK version in the future, only need to change the environment variables of JAVA_HOME, and don't need to change others.

1. Click "OK" to save.

Set Environment Variables PATH

- PATH variable usually has other values, so instead of adding this, we need to find the “PATH” variable in the list and **click “Edit”**.
- PATH contains lots of paths; **click “New”** and then input **%JAVA_HOME%\bin**
- **%JAVA_HOME%** is the path of JAVA_HOME

Install Eclipse IDE

- <https://www.eclipse.org/downloads/>

The Eclipse Installer 2022-06 R now includes a JRE for macOS, Windows and Linux.

An Open-Source Strategy

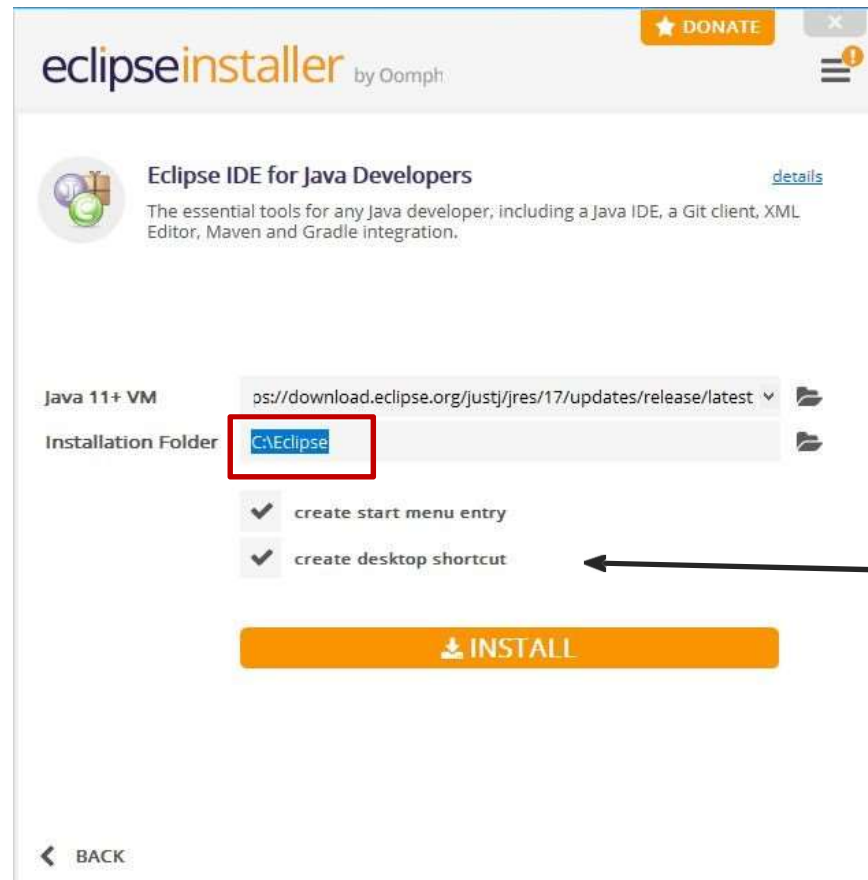

Install Eclipse IDE

- You can download the basic Java SE (first one) for usual, and use Java EE(Enterprise) for the final.
- Eclipse is the tool for coding in the future, so please put the unzipped folder in a suitable place (ex C:\), don't put it in the folder like "Download" to avoid losing it in the future.

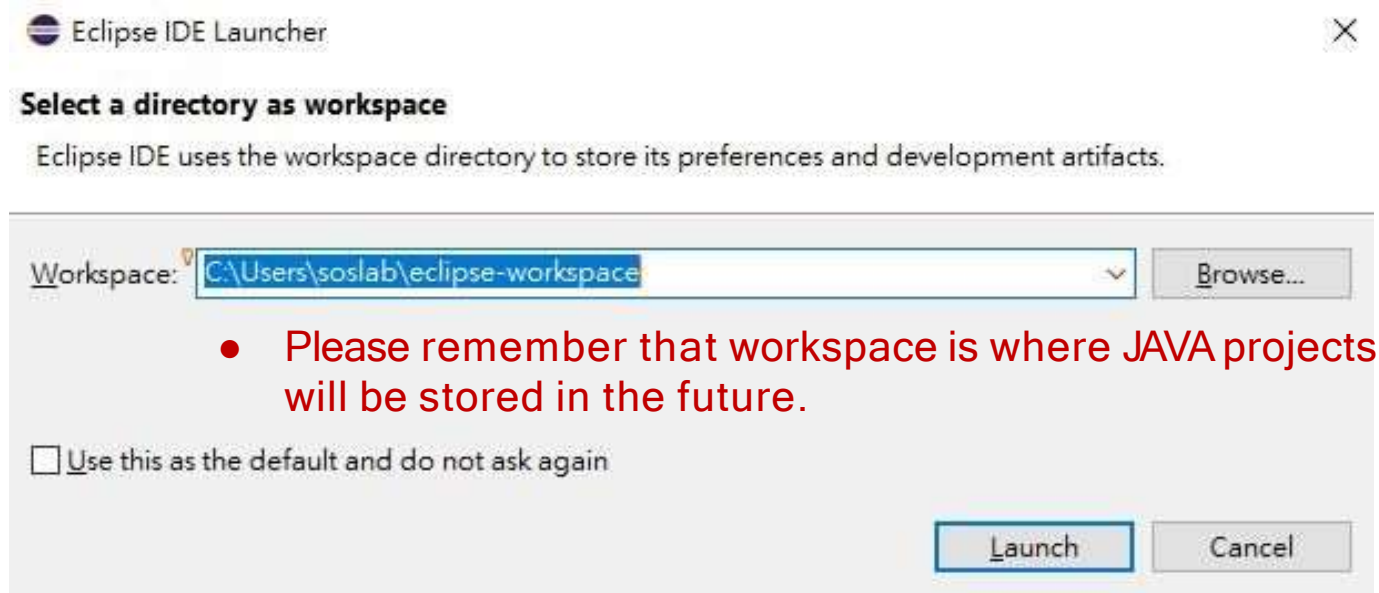

Install Eclipse IDE

- Recommend adding a new folder (ex: Eclipse) in driver C, and select the folder you just created here.

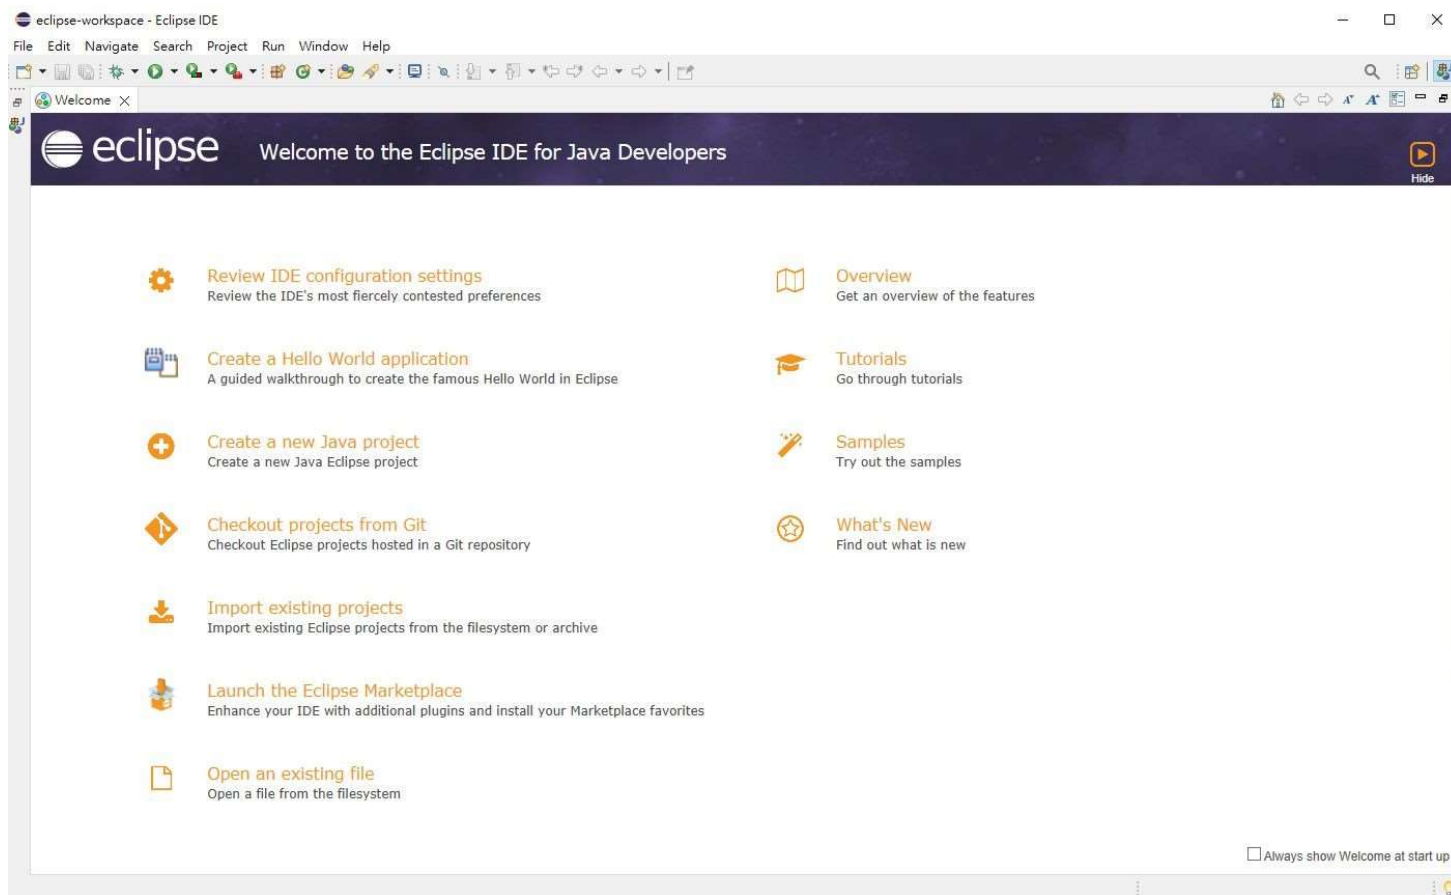

- Recommend everyone put a shortcut of Eclipse on the desktop, it will be easier to find in the future!

Open Eclipse IDE

Finish!

- Students who have used commercial development environments, such as Visual Studio, will feel difficult to adapt when they are new to Eclipse. However, Eclipse is a high-end free development environment; the function of Visual Studio can also be used on Eclipse with a little setting.
 - Following will teach everyone set the code auto completion function via “Preference...”
-

How to open Preferences...

- Windows

The top menu of Eclipse “Window” → “Preferences...”

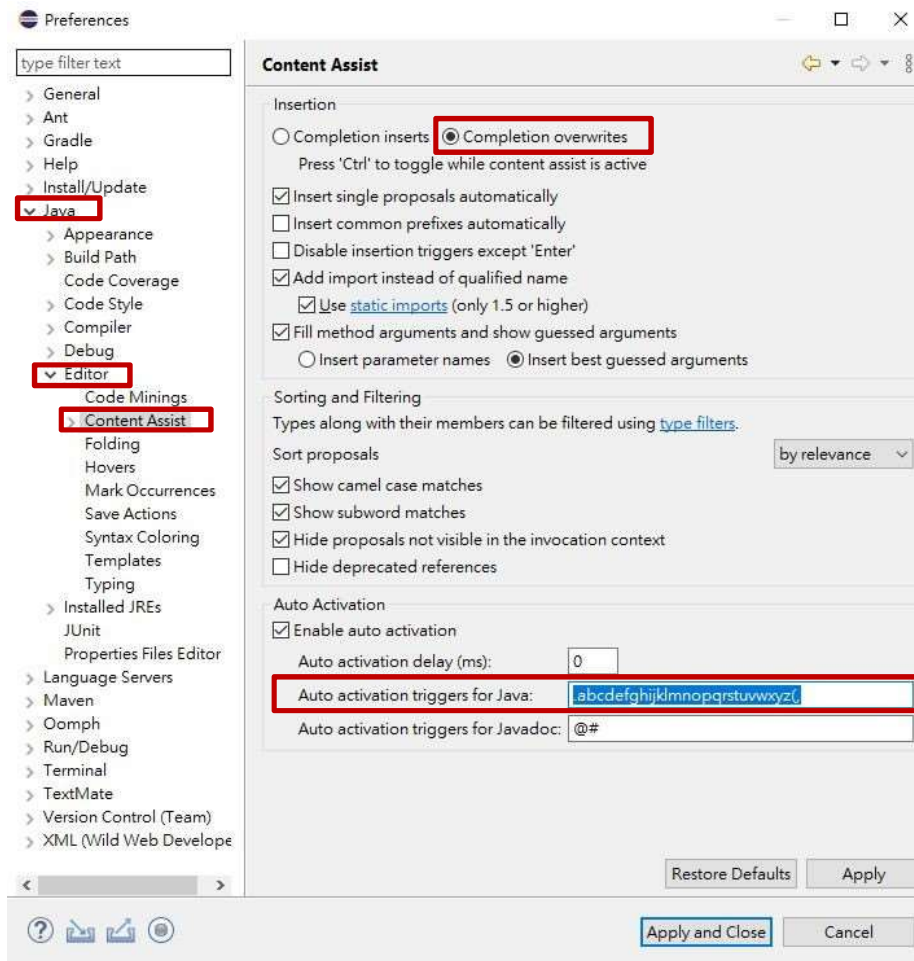

- MAC

The top menu of Eclipse “Eclipse” → “Preferences...”

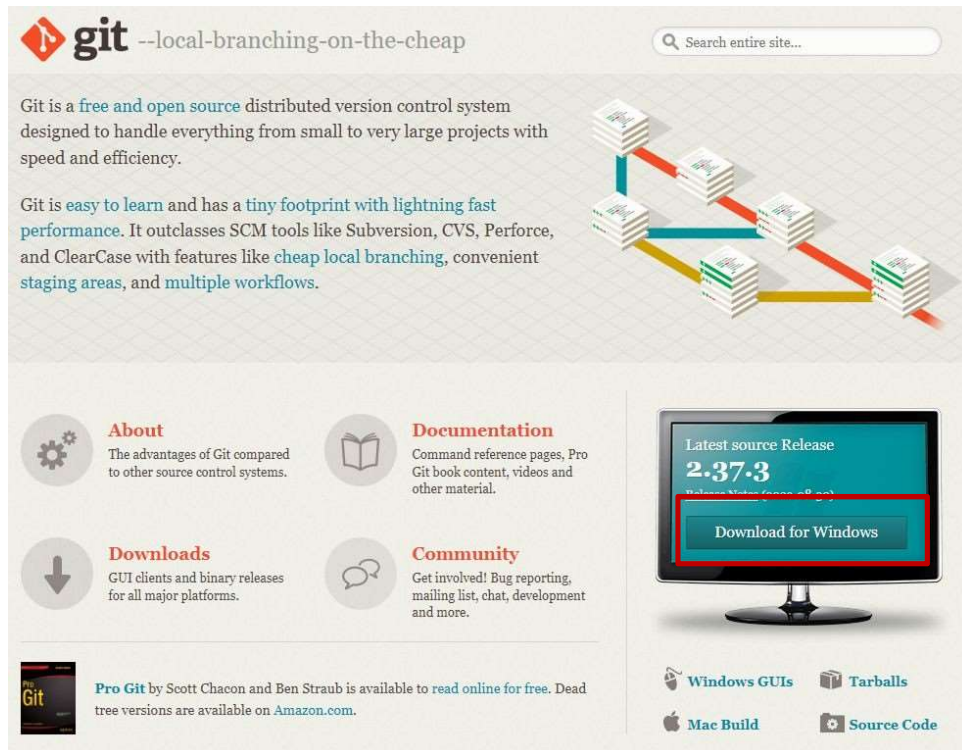

Code auto completion

1. Open “Preferences...”
2. Preferences select “Java” → “Editor” → “Content Assist” on the left side.
3. Choose “Completion overwrites” on the right side.
4. Change “Auto activation triggers for java” value to **.abcdefghijklmnopqrstuvwxyz(,**

Install git

- <https://git-scm.com/>

The image shows the Git website homepage. At the top, there's a navigation bar with the Git logo and the tagline "--local-branching-on-the-cheap". Below this, a search bar is visible. The main content area features a large illustration of a branching model with multiple stacks of code blocks connected by lines. To the left of this illustration, there's a paragraph describing Git as a free and open source distributed version control system. Below this, another paragraph highlights Git's ease of learning and performance. On the right side of the main content area, there's a section with four icons: a gear for 'About', a book for 'Documentation', a download arrow for 'Downloads', and a speech bubble for 'Community'. Each icon has a corresponding title and a brief description. At the bottom left, there's a small section for 'Pro Git' book. At the bottom right, there's a section for 'Download for Windows' with links for 'Windows GUIs', 'Tarballs', 'Mac Build', and 'Source Code'.

Download for macOS

There are several options for installing Git on macOS. Note that any non-source distributions are provided by third parties, and may not be up to date with the latest source release.

Homebrew

Install [homebrew](#) if you don't already have it, then:

```
$ brew install git
```

MacPorts

Install [MacPorts](#) if you don't already have it, then:

```
$ sudo port install git
```

Xcode

Apple ships a binary package of Git with [Xcode](#).

Binary installer

Tim Harper provides an [installer](#) for Git. The latest version is [2.33.0](#), which was released about 1 year ago, on 2021-08-30.

Building from Source

If you prefer to build from source, you can find tarballs [on kernel.org](#). The latest version is [2.37.3](#).

Installing git-gui

If you would like to install [git-gui](#) and [gitk](#), git's commit GUI and interactive history browser, you can do so using [homebrew](#)

```
$ brew install git-gui
```

Check git installation

- Check whether the git installation is successful.
- Type *git --version* in Terminal and enter.

```
Git. Command Prompt
Microsoft Windows [Version 10.0.19044.1889]
(c) Microsoft Corporation. All rights reserved.

C:\Users\soslab>git --version
git version 2.37.3.windows.1
```

```
(base) [redacted]@MacBook ~ % git --version
git version 2.33.0
```

- It will show the version you installed, that means your installation is successful.

Done!
